

Growing Roses

Who doesn't love roses? Personally, I envy those who are knowledgeable about growing roses, and extra envious of those who know the names of all the different roses Growing roses in Phoenix? Even in our withering heat, many varieties thrive, often in neglected conditions or without tender care.

Know your Planting Zone

Rose area on the south side of our home

There are multiple rose locations on our property. On the south side of our home, a rose garden is planted, with approximately 20 rose bushes. Quite honestly, I do not know the varieties of my roses, as these were initially selected by our landscape architect long ago. But now that I have the time, I am excited to be involved with all aspects of our roses.

Learn to Prune

Here is the last bouquet I cut before a hard pruning in January. This pruning is done for shape and to foster vigorous spring growth. Care of roses can be as complicated or straightforward as you care to make it, depending on the varieties you are growing and the zone in which it is grown. Remember to always select roses that are well suited to your area.

Rich Soil, Fertilizer, Water

Screening compost

Roses grow best in rich, fertile soil that is kept evenly watered throughout the year. In March, I add new compost soil around the beds of the roses, removing weeds and turning up the dirt. In addition, I check the watering system and add a rose fertilizer. This rose food can be found at [Whitfill Nursery](#). The dogs LOVE it so you need to be extra careful that they do not ingest it.

Creating small berms around each plant helps with water retention.

Heirloom Roses

Next I move onto the heirloom roses that are on the periphery of the orchard. These 10 bushes are the original roses that we were able to save through the restoration. To read more about our house restoration, click [here](#).

Heirloom roses

I believe these are Quatre Saisons (known as “Rose of the Four Season). This rather gawky, prickly rose produces the most fragrant blossoms. To read another story about these heirloom roses, click [here](#).

Ramblers

Lady Banks' rose hedge

In the front of our home, we have an additional 8 rose plants in front of the large Lady Banks' roses. This old rambler, introduced in 1807, is very tolerant of the hot and dry conditions. Since we are growing it up the existing fence, Lady Banks' provides a thick privacy hedge to the busy road. It is just now beginning to bloom with its small, yellow flowers. Soon this hedge will be one solid row of yellow.

Rose Hedge

Mysterious rose hedge

The last of our roses is an enormous shrub rose. I do nothing to this because it is so huge. To give you an idea of its size, the wall behind it is 6 feet tall. It is approximately 12 feet x 10 feet by 12 feet tall. The bush is so thick with cane too and is the perfect habitat for birds.

Just starting to bloom, this shrub produces these delicate pink blossoms with a faint fragrance. If anyone knows anything about this rose shrub, please let me know. I imagine it has been here a very long time.

So all in all, we have 40 rose bushes, several Lady Banks' bushes in both white and yellow, and this mysterious hedge above.

As I mentioned earlier, my goal is to tend to them this year and learn as much as I can about their origins, official names and classification. With most things in life, there are lessons to be learned, like wearing a long sleeve shirt while

doing rose work.

“Death offers you thorns, eternity offers you roses, and life offers you both.”– **Matshona Dhliwayo**

Happy Wednesday to you! If you grow roses, please share. If not, I hope this post inspires you to do so. Roses are tougher than they look.
